

# CLEANING + DISINFECTION

## “YES!”

**...you can clean and disinfect your PolySorb panels**

In the post-COVID environment it is still important to properly clean and disinfect your surfaces and public spaces and offices. Fortunately, our PolySorb products are made out of recycled plastics - so they are very easy to sanitize!

## “EASY!”

**...follow these simple steps to disinfect your panels**

1. Choose one of the recommended disinfectants.\*
2. Lightly spray the surface of the panel with a hand spray bottle. Feel free to apply generously.
3. Allow the panels to fully air dry.

- \* For disinfection, common household EPA-registered solutions should be highly effective.
- \* Please refer to the EPA-approved product list that are effective against the virus that causes COVID-19.
- \* A diluted solution of household bleach (at least 1000 ppm sodium hypochlorite) can be sprayed on. Prepare a bleach solution by combining 1/3 cup bleach per gallon of water. Bleach solutions will remain effective for a time period of up to 24 hours.
